

We Make Solar Energy Visible

LET DRAKER LABS' EXPERIENCE WORK FOR YOU

Cutting corners with the brains of your power system doesn't add up when you look at the long-term risks associated with missing performance guarantees. Draker Labs has been monitoring commercial solar systems for over 6 years; our solutions are used by and built for project developers, Energy Procurement and Construction (EPC) companies, Power Purchase Agreement (PPA) administrators, investors and utilities.

Our field-based data acquisition systems are enhanced by intuitive web-based tools. We base our success on **customer service**, up-front **engineering design**, detailed in-house **equipment testing**, optional onsite **commissioning services**, and post-sales **product support**.

Why Draker High Performance Monitoring?

- Higher yield + lower O&M = maximum ROI
- Accurate analytics based on Draker expertise
- Efficiently manage O&M resources and costs
- Pinpoint problems before dispatching maintenance
- Reliability for years of worry free operation
- Industry-leading 5 year warranty

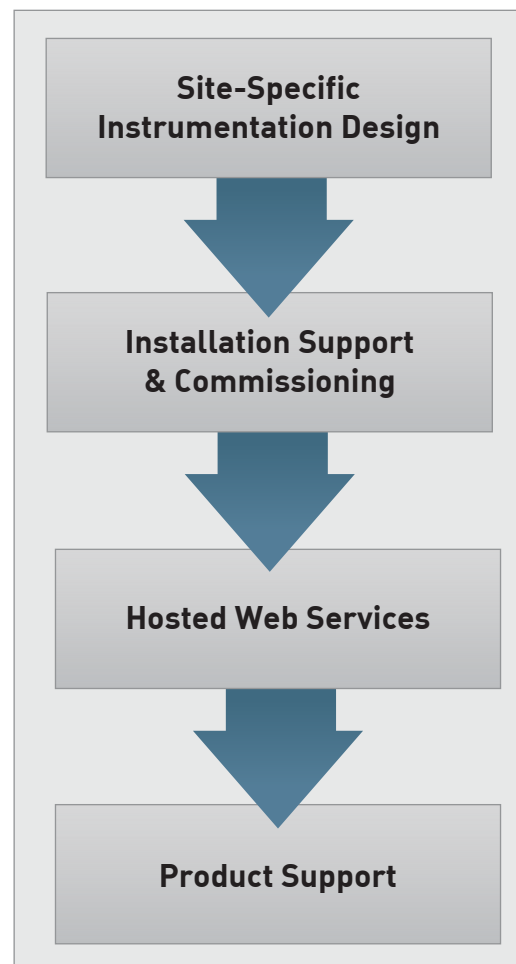

Why Third Party Monitoring?

- Independent of power system technology
- Monetize incentives, FITs and RECs
- Uninterrupted data during inverter downtime
- Secure and professional data management

Why Integrated Instrumentation, Web Services & Product Support?

- Turn-key solution for scalability
- No need for multiple vendors
- Save installation and troubleshooting time
- Seamless transition from data collection to analysis
- Synchronous timestamping

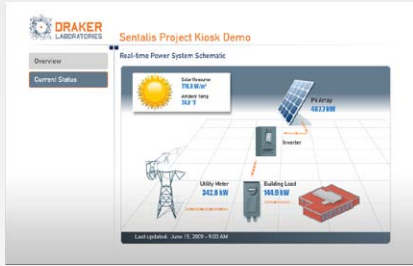

INTEGRATED SOLUTION

WEB SERVICES

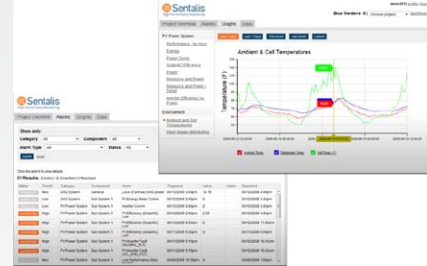

Available Anywhere. Fully hosted, secure web services as part of our monitoring solutions.

PUBLIC DISPLAYS

- Educate users with intuitive animations
- Facilitate customers telling their solar story
- Sell more systems by showcasing projects

SYSTEM MANAGEMENT

- Manage multiple assets
- Save time and money troubleshooting individual projects
- Distribute data on a need to know basis with role-based settings

SECURITY & ACCESSIBILITY

- Secure data hosting through industry leading provider
- Easily download all your data at any time
- Create your own application with our developer API

INSTRUMENTATION

For survival under any climatic conditions.

Our Sentalis™ product line consists of modular components for configuring turn key hardware packages to industry best practices. Each monitoring system is an all-in-one information gateway connecting everything needed to understand solar power plant performance. This allows you to deploy cost-effective monitoring solutions to even the most complex sites.

FIELD SERVICES

Painless system integration.

Leverage years of Draker experience to make sure your monitoring equipment is installed using best practices. Don't risk missing your incentive deadline! By selecting Draker Labs' installation management and monitoring system commissioning services, you ensure installation happens on time and within budget.
